

# YOOPER SCOOPER - Special Edition -

Please remember your fallen and wounded law enforcement officers on May 15.

## Planning Our Future

The millions of acres that comprise the north woods plains has been targeted by the environmentalist as an ideal biosphere. Michigan State University Extension Service, DNR and other taxpayer funded organizations agree with the Eco-Nazis' plans.

The north woods preserve is essential in maintaining a diverse region free of any type of invasive species. Whether taxpayer funded or by citizen contributions, the environmentalist want the areas free of any humans and any other non-native plants or animals.

The problem boils down to one simple denominator; they think they're gods.. Ducks and geese carry invasive species' fish eggs on their feet, not to mention what they carry in their excrement. Animals, including man, have always roamed and relocated.

## Special Edition of the Yooper Scooper

We truly hope you're enjoying the Yooper Scooper and our attempts to inform the citizens of the U. P. and those that can see all this coming to their own back yards, but it appears as if the citizens of the U. P. are contently apathetic. It also appears that the U. P. media has even sold them out.

The saddest statement is that the citizens themselves may have become loyal to those espousing environmentalism. There is absolutely nothing wrong with protecting our lakes, streams, air and soil from pollution or other harm, but not at the expense of human liberty.

Perhaps a hundred years from now some young man or woman will find a copy of this newsletter and try to figure out what life was like outside the fences of the communitarian district. They will simply mumble, it's too bad the people weren't more vigilant in the early 21st Century..

# Childhood Vaccinations

By Elaine Daniels

Though realized by very few people, every shot on the Michigan childhood vaccination schedule can be refused by the signing of a simple waiver; though this waiver is virtually never mentioned as an option. It is up to parents to determine if their child(ren) should have all or none of the 32 "required" vaccinations. The state health agencies and school systems have led the public en masse to believe that their children will not be allowed into schools or daycare facilities without them.

Due to this erroneous belief, countless parents have allowed their children to be mass vaccinated without really knowing the truth about what is in the vaccines or what these vaccines actually do to their forming brains and bodies.

Of the many shocking ingredients on the list in these seemingly innocent injections, which include aluminum, formaldehyde, anti-freeze, animal organ cells and human aborted fetal tissue, the most alarming is the preservative used to keep the vaccine serum from becoming contaminated by bacterial growth. This preservative is called Thimerosal and is nearly 50% ethyl-mercury. Mercury is one of the two most le-

thal substances known to man. Second only to uranium.

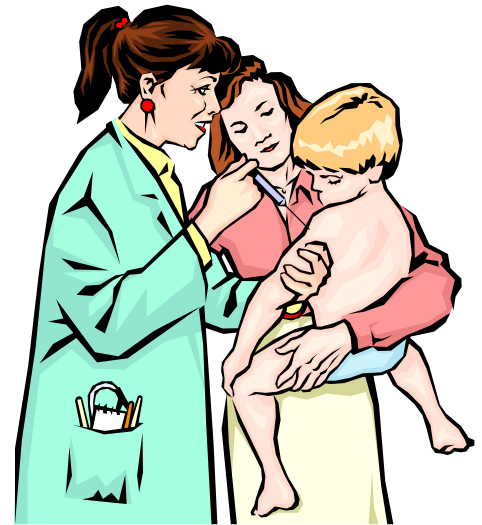

Mercury is highly poisonous and is well-known as a neurotoxin (meaning toxic to the brain and nervous system) according to the government's own documentation.

As the number of shots increased on the vaccination schedule, so concurrent was the rise in a whole host of neuro-developmental disorders, including ADD, ADHD, learning disabilities, speech delays, behavioral disorders, emotional disturbances and autism (to name a few).

In a decades time, from 1994 to 2003, Michigan's childhood vaccination compliance went from 61% to 81%, and the cases of full-blown autism rose 1,538%. Michigan went from being last place in the country for vaccine compliance to fourth, and we are now officially the fourth highest state for autism. Less than two decades ago, in this country, the rate of autism was 1 in 10,000 births.

Today it is 1 in 166. It is much more prevalent in boys, giving them now a rate of 1 in 33.

It has never been necessary to have the mercury-laden Thimerosal preservative in vaccinations to begin

with. It is far more profitable for the pharmaceutical companies to produce vaccines in multi-dose vials rather than single-dose vials. This allows one large vial to be drawn from, through a rubber stopper, numerous times as opposed to a single tiny vial discarded after one use.

More money for the pharmaceutical companies; more autistic children for America. Mercury-laced apple pie anyone?

*Editor's Note: The Americans for Constitutional Enforcement (ACE) will have a special presentation on this subject on Tuesday, May 17th, 2005 at 1830 (6:30 PM) CST. ACE meets in the Premier Center (old roller rink) behind Country Kitchen restaurant in Iron Mountain on the third Tuesday of each month. Hope to see you there!!! ~J.*

## SPECIAL MEETING ABOUT VACCINATIONS

The public is invited to a special presentation regarding vaccinations to be held on Friday, May 27th from 1830—2100 CST at the Kingsford High School auditorium. KHS is located at 431 Hamilton Avenue. Doors open at 1800 and a donation of \$5.00 is requested in advance and \$10 at the door.

The presenter will be Mary Tocco, President of the Autism Autoimmunity Project of Michigan and Mary is also the Director of Vaccine Research for M. O. M. (Michigan Opposing Mandatory Vaccines). The requested fee will help cover the cost of the auditorium rental, speaker honorarium & expenses.

Some of the topics will include:

- What is in the childhood vaccines?
- What are the known risks?
- What are my rights in Michigan?

Please telephone Joanne Antonetti at 906.774.5234 to reserve your seat.

# IP/LSLC, TNC close on first stage of Keweenaw land sale

By Michele Anderson—KeweenawNow—January 3, 2002

*Editors Note: The following article was printed in KeweenawNow in January, 2002. This was one of the beginning initiations by TNC and other eventual land-grabbing schemes by TNC across the U. P. and northern lower Michigan.*

*What is most intriguing, disturbing and of particular interest is the final paragraph in this article inserted by the author. This all reminds me of the Twilight Zone episode called "To Serve Man". The huge book was brought to earth by aliens, who showed humans how to thrive, raise crops and live in virtual comfort. At the end, one of the researchers discovered that the book, "To Serve Man", was really an alien cookbook on how to prepare man to eat.*

HOUGHTON -- On Thursday, Jan. 3, 2002, International Paper/Lake Superior Land Co. (IP/LSLC) and The Nature Conservancy (TNC) closed on the first part of the Keweenaw Tip land sale totaling 4,069 acres for \$5.72 million. The second part of the transaction, totaling 2,206 acres for \$6.33 million, will close in December 2002.

Under the purchase agreement, TNC will purchase a total of 6,275 acres at the Tip of the Keweenaw Peninsula and hold it until state funds become available for purchase by the Michigan Department of Natural Resources (DNR). The project will conserve the forested character of the land and protect important recreational and ecological resources, including 6.5 miles of Lake Superior shoreline, 4.8 miles of inland lake shoreline and 3.5 miles of Montreal River shoreline.

Jeff Knoop, director of land protection in TNC's Upper Peninsula office in Marquette, said the \$12 million land sale is one of the most significant acquisitions that the State of Michigan DNR and The Nature Conservancy have ever done under a cooperative agreement.

"This acquisition protects some of the most wild and pristine lands remaining in the Upper Peninsula of Michigan (and) connects to approximately 2,500 acres already owned by the DNR," Knoop said on Jan. 3, after the closing. "It also connects to 1,500 acres already owned by TNC."

Knoop said the connecting lands bring the total of protected Lake Superior shoreline to about 12.5 miles. He noted also that the purchase will protect wildlife -- including lynx, possibly wolves and many rare and endangered birds, fish and other mammal species. Knoop said he spotted a lynx on a visit to Hoar Lake, one of the areas included in the first part of the land sale.

Rolf Peterson, professor of wildlife ecology at Michigan Technological University, said he was unaware of any lynx in the Upper Peninsula, but the land sale could secure wolf habitat for the future. Although the amount snow in the area presently limits the number of deer and therefore the number of wolves, Peterson noted, the Tip of the Keweenaw provides habitat for snowshoe hares (which are prey for many carnivores and critical for lynx), bobcats, fisher and marten. The fisher (of the weasel family) and the marten were formerly extinct in Michigan but re-introduced in the 60s and 80s, respectively, he added.

"It's certainly potential moose habitat, but to my knowledge there aren't any moose out there yet," said Peterson, who has done long-term research on moose and wolves in Isle Royale National Park. Peterson called the land purchase by the state through TNC a wonderful idea.

"It's time somebody came to the table to secure valuable land for public use," he said.

Dave Lieser, IP's region manager of the Northern Operations for Forest Resources, said the company's economic goals and the conservation of natural resources are not mutually exclusive.

"This land sale to The Nature Conservancy provides yet another example of how economic and resource conservation goals converge to benefit the public, the environment and our company," Lieser said.

TNC will transfer the first part of the land purchase to the DNR in February 2002, when the Michigan Natural Resources Trust Fund money becomes available. On Sept. 12, 2001, the Trust Fund Board recommended \$5 million for the Keweenaw Tip project and also committed to recommending the remaining \$7.5 million in 2002 to complete the purchase by the state. The final transfer of the remaining acreage from TNC to the DNR is anticipated for August 2003.

Jim Ekdahl, DNR Upper Peninsula field deputy in Marquette, said public support and public patience played a big role in this project, which started as a land exchange proposal several years ago.

"This is a great day for all of us who care about natural resources in Michigan," Ekdahl said on Jan. 4. "It's really satisfying for all of us to see the kind of resolution we were able to achieve. We knew there was a better way to acquire this property than was presented by the exchange. It's particularly satisfying

that in this situation we have a net gain of public land and natural resources, rather than having to give up one valuable area for another."

Michigan Rep. Rich Brown, D-Bessemer, who has been a supporter of the land sale, was happy to hear of the closing.

"This is a great way to start out 2002 with the finalization of a project that has been in the works for years," Brown said. "A lot of people deserve congratulations on their hard work and dedication to this purchase. I am glad I could at least play a small part in making this a reality."

The purchase will include sand and gravel rights, but in a separate agreement, International Paper will negotiate the potential sale of deep mineral rights on these lands exclusively with the State of Michigan. Through the Sustainable Forestry Initiative (SFI) program, the company will continue to own and manage some 109,000 acres of forestland above the Portage Canal in the Keweenaw Peninsula.

Founded in New York State 50 years ago, The Nature Conservancy is the world's largest private conservation organization. Its mission is to protect plants, animals and ecosystems by preserving the lands and waters they need to survive.

International Paper is the world's largest paper and forest products company. Businesses include paper, packaging and forest products. As one of the largest private landowners in the world, the company has managed its forests under the principles of the SFI program, a system that ensures the perpetual planting, growing and harvesting of trees while protecting wildlife, plants, soil, air and water quality. Headquartered in the United States at Stamford, Conn., International Paper has operations in nearly 50 countries and exports its products to more than 130 countries.

To learn more about the negotiators in this project see the Web sites of [The Nature Conservancy](#) and [International Paper](#). To read about the Trust Fund's commitment to the Keweenaw purchase and their agenda for 2002, see the [DNR Web site](#).

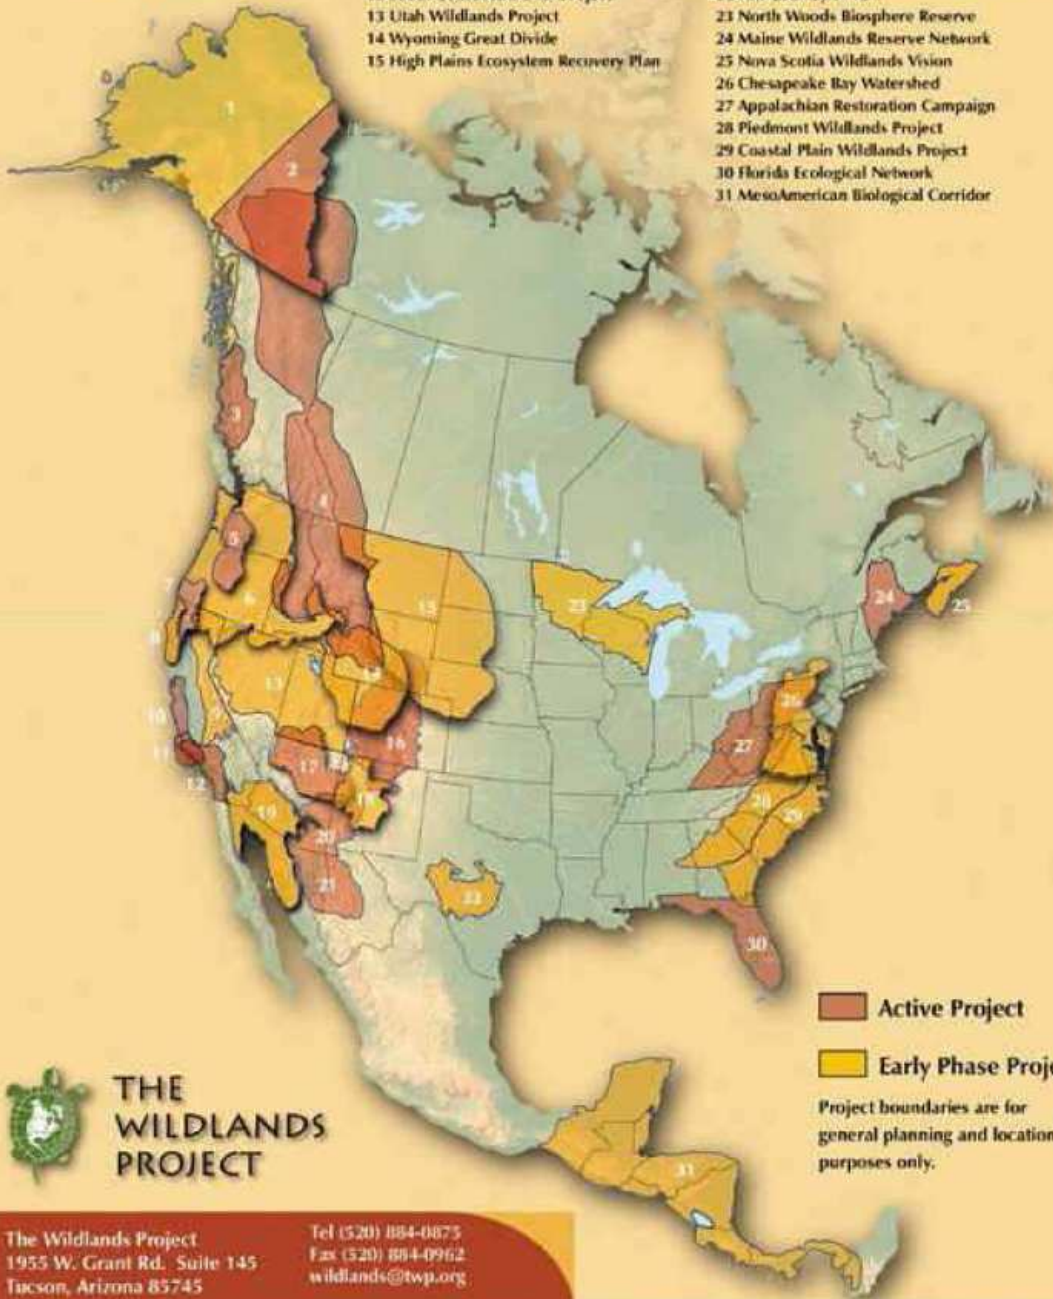

Read [the Jan. 3 article on the Keweenaw Tip land sale](#) and how you can help TNC in fundraising for the \$500,000 interest needed for this land purchase. In this article, see comments by Walt Arnold, director of marketing and sales for IP/LSLC and one of the key negotiators in this project.

# Wildlands Conservation Planning Efforts

The Wildlands Project works to protect and restore the natural heritage of North America through the establishment of a connected system of wildlands.

 wildlands@twp.org

The Wildlands Conservation Planning Efforts map reveals an ideological plan to sustainability and linked biospheres across the North American continent.. What they hope to accomplish is not a vast nature preserve for us to use as campers, hikers, hunters, fishermen or particularly ORV enthusiasts.. No human will be authorized to “visit” their biospheres without being accompanied by a guide. We will probably have to win a lottery to qualify for one of their well supervised Sustainable Tours; via an Eco-tour.

# Science Fiction or A New World Order?

United Nations Agenda 21 is an incremental take over of the world by the highly incompetent, power hungry, wealth-seeking individuals that make up an unaccountable united world power house. The Democrats across the United States are trying their best to keep anyone like John Bolton from getting their hands on the corrupt and dictatorial United Nations. We need to ask the Democrats, "Why?"

The Oil-for-Food scandal, the U. N.'s lack of leadership regarding Iraq, Iran, Syria and Palestine and, like a chained dog, the U. N. had a lot of bark, but were safely restrained. Russia, France and Germany held their ground by opposing President Bush's decision to take decisive action against a tyrant.

In their latest attempt to control the world markets, the United Nations is attempting to impose a tax on all goods crossing the ocean and also take a cut of the monetary brokerage system that had generated a vast amount of investment around the world.

Numerous citizens around the United States are denouncing the United Nations as a communist organization with no respect and more importantly, no leverage in world affairs. This denunciation has led to numerous hues and cries to have the United States pull out of the U. N. and to kick the organizational headquarters out of the U. S., and they want it done immediately.

The problem with the people in the U. S. is they are insignificant little turds in the cesspool of life. The Democrats are united and have the Republicans acting like their neutered lap dogs. The Democrats want to have a controlling system based on environmentalism and a need to protect the citizens from themselves and the Republicans are evidently too gutless to take a stand when they are indeed the final hope for America. Has the Third Party time arrived?

In the final analysis, the citizens of the United States and the rest of the world are in the midst of a battle between good and evil that has now escalated into an all-out war. Satan is one pissed piece of useless debris and is doing all he can to take as many of us with him as he can.

# The Big U. P. Deal

If you're a resident of Luce, Alger or Keweenaw County, you're already screwed; The Nature Conservancy has ownership of a great deal of land in those counties and summarily, through "buffer zones" and easements have additional controls ready to be implemented. The non-profit group and like-minded tree huggers and Eco-terrorists have been making their marks all over the world. The bitter truth is that if you don't wear khaki shorts and hiking boots, you're not a card-carrying member.

***After selling-out the Upper Peninsula to the Eco-Nazis, Granholm will ensure she has some job to turn to when she is ousted as governor of Michigan.***

The travesty in all this is that the DNR, even though they don't listen to the people, at least have some level of public meetings. Those that are caught up in the environmentalist movement have lots to gain while the serfs, like you and me, have a whole lot to lose, including access to the lands for both our livelihood and for our recreational activities. The Eco people are highly indoctrinated.

Perhaps they've watch the movie *Dances with Wolves* too often, but to suggest animals are capable of thinking with some level of logic is psychotic. Although it would be a challenge to determine if the Eco people themselves are capable of logic, there seems to be one significant undertone to all the movements, from the U. N. Agenda 21 to the indoctrination of the little kids in the public schools.

Nature is far more important than people, especially people who profit from the natural resources. Despite the fact that the pine (conifer) forests are the least desirable because they fail to emit oxygen and provide little sustenance to animals, they want to protect it; or do they? In reality, pine forests emit noxious gases and are far more susceptible to wildfire, but there is money to be made in their harvest.

## “The Victimization of Valerie Lantz”

by C. J. Williams

Valerie Lantz is a single, well-educated 56 year-old woman farming 79 acres high on a hill in the Keweenaw Peninsula west of Calumet, MI. This woman, who long ago enjoyed a professional career in the Land of Lincoln, loves her farm, once unencumbered by lien.

Entire life investments wasted on attorneys and others with their own environmental agenda, Val is now reduced to using food stamps whenever she can bum a ride to town. Truck needs repair, one tractor has died, and she owes for her hay because all income must satisfy debt incurred through treachery of those wanting her land and those others willing to help them get it.

When she bought and the moved to her farm, Val didn't know she'd nested among un-neighborly neighbors, some now identified as active members of the pyramiding land grabbing and controlling organizations throughout the U.P.

These neighbors, and others a bit further away, have victimized Valerie for well over a decade, making false claims of animal neglect, having her fence too close to the road and allowing beavers to set up housekeeping on her property, among several other things. No doubt beaver dams despoil the Nature Conservancy's wetland in their Keweenaw Peninsula watershed, located not too far from the U. N. and TNC Biosphere at Isle Royale.

Countless claims of cattle running loose, pigs on the prowl, and then finding unexplained breaks in the two-strand electric fence that interrupts the “Open Spaces” Valerie's neighbors wanted her to learn about at their eco-brainwash

meetings. She was invited to attend soon after being hauled off her farm in handcuffs because of a farm fence issue one of them had raised.

Val's best friend is her protector, a very friendly working farm dog named “Spirit” who heads and heels her cattle and watches that her pot-belly pigs and chickens don't come to harm.

Spirit, who looks like a healthy Shetland Sheepdog-Heinz mix, wards off wolves, coyote, cougar, and other predators that threaten his master and “their” animals. Deer are also unwelcome visitors. They can't be allowed on the farm to dine with livestock because of the T.B. threat and other diseases. However, Spirit doesn't try to run them down and kill them; he just chases them out of the pasture.

Val just spent ten months finding a ride to the Houghton Co. Courthouse to defend herself and Spirit from yet another trumped up charge. Spirit, the neighbors say, was seen viciously attacking a fawn in the ditch out in front of Ina & Joe Weiss' property by Ina & Suzanna (Sue) Raker.

He growled savagely at Sue, menacingly stalking all three, even Ina & Joe whom he'd known for 5 years, as the grievously wounded fawn was moved to shade or sun, depending on whom one wishes to believe. Val, however, with veterinary supplies at hand, wasn't even allowed to see the poor thing, as it lay wounded somewhere on the Weiss property.

Judge Kukkonen should have immediately dismissed the case upon learning that investigating officer, Dep. Mark

Bukovich, who owns a “nature photography” business, left a sloppily penned and undated note, without compliment of envelope, in Valerie's mailbox summoning her to a court appearance on June 30, '04.

Bukovich, it seems, didn't notify the DNR, but he did find the time to call Mr. Weiss who told him the deer had died the next day. Val, however, has yet to see a ticket for allowing Spirit to stray, as he worked with her along the road front fence line facing the Weiss property.

Valerie refused to plead guilty, and after seven hearings at taxpayer's expense, the case went to jury trial on April 27, '05. She tried, but was no match for Watershed Council donator, Prosecutor Strome, who so thoroughly inflamed the jury at closing that they returned a guilty verdict within an hour's time.

Although Raker described a much different dog, and despite the fact that reasonably controlled farm dogs need not be leashed, Valerie Lantz has committed the crime of allowing Spirit to be unleashed that fatal day.

Val must now pay a \$210 fine plus a \$120 6-month probation fee. However, when she breaks probation, as one or more of her “Open Space” eco-system neighbors surely will claim she has, Val will sit in jail for 90 days while her livestock, and Spirit, get hauled away because she's no longer there to care for them.

Yooper Scooper readers wanting to learn more about the case may contact me at 906-338-2507. ~Cj

*Editor's note: Citizens living within the shadows of an environmental biosphere may be financially decimated by these groups, who even go as far as to claim a heritage to gain the trust of the elderly.*

## A Call to Action? —Your Call

A call to action today may prevent a call to arms tomorrow. A majority of the U. P. is inhabited by people with neo-conservative (FDR) values and the statistical data shows that those who pay attention to politics and world affairs are also conservatives. The monkey people, as we like to call them, are the Neo-liberals who are godless and feel they can take away the management of nature from God.

Since conservatives are not known for their activist ideologies and protesting skills, we have to approach the issues that concern us most in another way. Those with access to the internet must research and confirm the topics and the issues before making statements. Unlike the visceral monkey people, conservatives are thoughtful and move with purpose and determination when the need arises. It arises now.

There is enough information contained in this issue to help stimulate your need to discover more on the topics. Keep in mind that first “they” must disarm us, then they don't have to bother trying to convince us. Also, it's very easy to earn the trust of a child and the liberals have been indoctrinating our children. Pray, fellow citizens, that the world isn't left to the elitists who view humans as both a nuisance and invasive species.

## Look Where Your Tax Dollars Go!

[http://www.landmarklegal.org/database\\_search.cfm](http://www.landmarklegal.org/database_search.cfm)

The link in the Headline is one of the most profound links you will find regarding the use of your tax dollars in funding environmental groups. Simply type in the search:

- Nature Conservancy
- Wildlands
- Sierra Club
- Wildlife Federation
- EPA (You'll love this one!)
- Public Radio

Find an environmental group and type it in or use your imagination.

Is there a problem with using tax payers' money to contribute to any non-profit group? Absolutely. The job of apportionment is reserved for the legislative branch, not to individual governmental units like the EPA, Bureau of Land Management and other federal agencies.

The earliest indications are that these "donations" had began in the mid 1990s, during the Clintonian era. Accountability was thrown out the window for eight years and the federal agencies festered into layers of bureaucracy that have taken on their own entity. Imagine how the media would treat the Republicans if they cut the EPA's budget?

TNC Private Funding:  
<http://www.undueinfluence.com/TNC%20Grant%20Records.pdf>

## Hillary Does the Military

A Lieutenant General stopped by the Whitehouse to have documents signed by the President. Since it was late, he had to go to the living quarters side and knock on the door. Hillary answered the door and the general excused himself and advised that he had to have papers signed by the President. Hillary saw the general standing there in uniform and went berserk.

Hillary Clinton went Bolton on the general and loudly announced that "we" do not allow any uniforms on this end of the Whitehouse. Hillary went on to tell the general if he has anything that the President needs to see that he must go and change into civilian clothes first. The Lieutenant General complied with Hillary's order and turned in his resignation the next morning.

Hillary is on the Committee for Armed Services, Subcommittee on Emergency Threats and Capabilities, Commission on Security and Cooperation in Europe and wouldn't you know it, the Committee on Environment and Public Works which she serves on the subcommittee on Transportation and Infrastructure. [http://www.senate.gov/general/committee\_assignments/assignments.htm]

## GLS

Want to have fun in the Wilderness and possibly join a mile-high club while still on the ground? Do you judge and demean the Rainbow People because they smoke dope, walk around naked in the woods, engage in heterosexual activities and act like the typical Woodstock Liberal? Then you may have an interest in joining the Gay and Lesbian Sierrans. Join on-line today! (Note: We usually don't sodomize wolves, just the human animals. Wink, wink.)

<http://angeles.sierraclub.org/gls/welcome.htm>

**U. P. PATRIOTS**

The Yooper Scooper is a private newsletter to be exchanged among friends and like-minded individuals via the internet or through a hard copy printed at personal expense. Even though Democrats can campaign from the pulpit while Catholic Priests have to remain silent with threats of being removed from their non-profit status by the Democrats, the freedom of speech still has meaning and relevance among the people. We would like to take this opportunity to stress that if you take offense to the content of this newsletter you are probably indeed a descendent from monkeys. As for the rest of us, we hold the truths of God, Creationism, Free Will, Ten Commandments and Constitution close to our hearts and in our souls. ~J. Powers, Editor

*Informing the masses.*

**Write us—Sign-up:  
yoopscoop@yahoo.com**

All the content contained in this Special Edition of the Yooper Scooper can be found and verified through various sources on the internet. The peculiarity about all this information is that it is not only available, but it is well documented with supportive information on all the topics contained in this newsletter, yet it has not reached the discerning interest of the mainstream or local media.

The media across the Upper Peninsula has been made aware of these issues, but since UGN TV (Alpena, formerly of Calumet) let Greg Peterson go to who knows where, we don't have anyone left in the U. P. who qualifies as a Journalist.

The contents of this newsletter, I am quite confident to say, has eluded most of us until now. We had no inclinations about the governor brokering land deals at our expense and eliminating much needed local revenues by selling vast areas of land to a non-profit group. Even those we elected to represent us in northern and western parts of the U. P. have completely ignored this devastating indoctrination among the people. Levin, Stabenow and Stupak are even more responsible since it is our money that is passed on to these non-profit groups by federal agencies that they should be overseeing on our behalf.

We'll see where all this goes on election day 2006. ~ J. Powers
